FUEL PROCESSING TECHNOLOGY

Contents Vol. 40

Vol. 40, No. 1

Hydrotreating of petroleum residues with dispersed catalysts derived from thiomolybdates and molybdenyl acetylacetonate
M. Marchionna, M. Lami and F. Ancillotti (San Donato Milanese, Italy) 1

The inorganic geochemistry of coal, petroleum, and their gasification/combustion products
J.C. Groen and J.R. Craig (Blacksburg, VA, USA) 15

Pyrolysis of high-boiling product fractions from petroleum vacuum distillate hydrocracking
G. Šebor, J. Blažek (Prague, Czech Republic), J. Lederer (Litvínov, Czech Republic) and M. Bajus (Bratislava, Slovak Republic) 49

Application of Robertson curve to coke yield during pyrolysis of topped crudes at constant heating rate
T. Wakabayashi (Tsukuba, Japan) 61

Effect of bitumen-derived coke on deactivation of an HDM catalyst
K.-S. Chu, F.V. Hanson and F.E. Massoth (Salt Lake City, UT, USA) 79

Letter to the Editor

Is elemental sulphur responsible for high sulphur coal?
M.K. Baruah (Assam, India) 97

Vol. 40, Nos. 2, 3

Special Issue: Fourth International Symposium on the Biological Processing of Fossil Fuels, Alghero, Italy, 21–23 September 1993

Preface 101

Prospects for biodesulfurization of coal: mechanisms and related process designs
G.J. Olson (Red Lodge, MT, USA) 103

A combined chemico-biological treatment of waste waters from coal depyritization with production of elemental sulphur
V.I. Groudeva and S.N. Groudev (Sofia, Bulgaria) 115

Conversion of sulfur dioxide to sulfate and hydrogen sulfide by *Desulfotomaculum orientis*
C.-M. Lee and K.L. Sublette (Tulsa, OK, USA) and M.J. McInerney (Norman, OK, USA). 123

Microbial removal of sulfur dioxide from a gas stream
J. Gasiorek (Luboń by Poznań, Poland) 129

An evaluation of autotrophic microbes for the removal of carbon dioxide from combustion gas streams
W.A. Apel, M.R. Walton, P.R. Dugan (Idaho Falls, ID, USA) 139

Bacterial pyrite oxidation: Influence of morphological, physical and chemical properties
G.I. Karavaiko (Moscow, Russian Federation), L.S. Smolskaja, (St. Petersburg, Russian Federation), O.K. Golyshina (Moscow, Russian Federation), M.A. Jagovkina and E.Y. Egorova (Petersburg, Russian Federation) 151

An overview of the bacteria and archaea involved in removal of inorganic and organic sulfur compounds from coal
G.I. Karavaiko and L.B. Lobyreva (Moscow, Russian Federation) 167

The influence of different chelators on the solubilization/liquefaction of different pretreated and natural lignites
R.M. Fakoussa (Bonn, Germany) 183

Depolymerisation of macromolecules from Morwell brown coal by mesophilic and thermotolerant aerobic microorganisms
J.P. Ralph and D.E.A. Catcheside (Bedford Park, Australia) 193

Liquefaction and/or solubilization of Spanish coals by newly isolated microorganisms
I.F. Monistrol and F. Laborda (Alcala de Henares, Spain) 205

Microbial degradation of model compounds of coal and production of metabolites with potential commercial value
K.-H. Engesser, C. Dohms and A. Schmid (Stuttgart, Germany) 217

The significance of chemical markers in the bioprocessing of fossil fuels
E.T. Premuzic, M.S. Lin and B. Manowitz (Upton, NY, USA) 227

Hydrodynamic behavior of a liquid–solid fluidized-bed reactor for the bioconversion of coal particles to liquid products
T.C. Scott, E.N. Kaufman and J.M. Cosgrove (Oak Ridge, TN, USA) and M. Asif and J.N. Petersen (Pullman, WA, USA) 241

Bioreactor performance versus solids concentration in coal biodepyritization
G. Loi (Cagliari, Italy), A. Mura (Porto Torres, Italy), P. Trois and G. Rossi (Cagliari, Italy) 251

The Porto Torres biodepyritization pilot plant: Light and shade of one year operation
G. Loi (Cagliari, Italy), A. Mura (Porto Torres, Italy), P. Trois and G. Rossi (Cagliari, Italy) 261

Biodesulphurization of Hungarian lignite and sub-bituminous coal
A. Szendrői, L.G. Gazsó and E.J. Hidvégi (Budapest, Hungary) 269

Microbial desulfurization of coal by *Thiobacillus ferrooxidans* and thermophilic archaea
G. Olsson, B.-M. Pott, L. Larsson, O. Holst and H.T. Karlsson (Lund, Sweden) 277

Combined physical/microbial beneficiation of coal using the flood/drain bioreactor
G.F. Andrews, K.S. Noah, A.W. Glenn and C.J. Stevens (Idaho Falls, ID, USA) 283

Microbial desulfurization of coal and oil
J. Klein, M. van Afferden, F. Pfeifer and S. Schacht (Essen, Germany) 297

Diffusion as a rate controlling step in heavy-oil biodesulfurization processes
L. Setti, G. Lanzarini and P.G. Pifferi (Bologna, Italy) 311

Mechanisms and effects of using chemically modified reducing enzymes to enhance conversion of coal to liquids
C.D. Scott, C.A. Woodward and T.C. Scott (Oak Ridge, TN, USA) 319

From the molecular biology of *Desulfovibrio* to a novel method for defining bacterial communities in oil field environments
G. Voordouw (Calgary, Canada) 331

Biological production of methane from bituminous coal
J.C. Volkwein and A.L. Schoeneman (Pittsburgh, PA, USA), E.G. Clausen, J.L. Gaddy, E.R. Johnson, R. Basu and N. Ju (Fayetteville, AR, USA) and K.T. Klasson (Oak Ridge, TN, USA) 339

Screening of fungi for the biological modification of hard coal and coal derivatives
F. Bublitz, Th. Günther and W. Fritsche (Jena, Germany) 347

Reduction of nitric oxide to nitrous oxide by cobalt porphyrins and corrins
W.T. Potter, J. Cho and K.L. Sublette (Tulsa, OK, USA) 355

Coal structure characterization and analysis by digital texture processing
M. Agus (Cagliari, Italy) and G. Bonifazi and P. Massacci (Roma, Italy) 361

The chemical structure of coal in regard of microbiological degradation
W. Hodek (Essen, Germany) 369

A strategic document on the biological processing of fossil fuels 379

Subject Index Vol. 40/2, 3 391

Newsnotes 397
